## Backpack Hi-Vis 25 litre - orange

Maximum outdoor visibility and work safety

Safety in the workplace is paramount, and accidents can be avoided with the right equipment. The EN ISO 20471:2013 standard guarantees optimum visibility for employees in turnout gear. In addition, numerous items of work equipment such as spare clothing, helmets, gloves and personal items can be transported safely and conveniently when working outdoors for several days.

The highly visible backpacks from DICOTA offer a reliable solution for the challenging everyday working life outdoors. All products fulfil important procurement criteria such as ergonomics, durability and sustainability. Highest quality and functionality meet sustainable materials made from recycled PET bottles - protection for employees and the environment at the same time.

Thanks to the use of fluorescent fabrics and 3M reflective strips in accordance with EN ISO 20471:2013, the backpacks offer excellent visibility and thus improve occupational safety in outdoor areas such as construction sites, forests and during rescue operations as well as on the way to work. The outer material is water-repellent in accordance with EN ISO 4920, level 4, and the rain cover supplied provides additional protection in heavy rain. The air-flow system in the back area guarantees pleasant air circulation when temperatures rise.

Work accessories and personal items can be stored efficiently in the 25 litres of storage space. The notebook is maximally protected with the tried-and-tested fit-all system. There are compartments for tablets, smartphones, power banks, torches, etc. as well as universally usable zip compartments. Valuables can be safely stored in the compartment on the back and are thus protected against theft. The backpack can be personalised with a name or logo patch thanks to the business card compartment on the back and the Velcro area.

The Hi-Vis 25 litre backpack offers maximum space, comfort and visibility and is ideal for a demanding working day outdoors. It also improves work safety and helps to prevent personal accidents.
